

Data Centers Canada Introduces Private Network Access Services

Issue Date: November 27, 2009

Toronto, Ontario Canada – November 27, 2009 – Data Centers Canada Inc., a leading Toronto Data Center operator which develops, manages and operates Canadian data center real estate for colocation services has announced it has expanded its service offerings to include Private Network Access Services to its Toronto North data center facilities.

Data Centers Canada has partnered with [Atria Networks](#) and [Allstream](#) to allow its clients the ability to deploy private network connectivity between DCC's Toronto North facility and its clients endpoint locations.

This expanded service offering allows private-network connectivity via MPLS, Switched Ethernet, or Private Line connectivity to clients infrastructure with the DCC colocation facility and abroad. DCC clients will be able to reduce total cost of network access for their end points as well as having a greater level of network connectivity and security for their information communications technology.
